

APOLLO TRUCK/RAIL PROBE ACCESSORIES: TICKET RETURN SYSTEM

HOW IT WORKS:

Simply place the ticket into the clear ticket cartridge. Load the cartridge into the sending chamber. Push the send button and the ticket is instantly sent to the driver. Powerful enough to shuttle the cartridge over 150 feet!

The Ticket Return System includes all of the necessary components needed to ensure quick and easy movement of the ticket cartridge throughout the system. The ticket cartridge provided with the system is clear for easy viewing. The vacuum motors used to drive the system are available in 110V or 220V versions. Standard 1½" OD tubing is required for all conveyor line connections. This system can be installed above or below ground. Call us today to order your new Ticket Return System.
