

STACKABLE POLYMER ELEVATOR BUCKETS

Seedburo offers 4B stackable elevator buckets which nest inside one another for reduced storage and shipping space, which saves you on freight charges compared to traditional buckets.

The unique patent-pending design includes tapered sides for improved filling and discharge, as well as the Iceberg Edge™ - a thick front lip design which eliminates bowing, therefore maintaining the original capacity and a clean discharge. The CC-S bucket provides greater durability and maximum wear life. Also these buckets feature a wingless profile for closer spacing and greater capacities.

4B - CC-S STACKABLE BUCKET
